200 MW
Nameplate Capacity

70,000
Homes Powered*

45
Wind Turbines*

*Estimated

BluEarth Renewables is committed to engaging stakeholders and community members in the decision-making process for our projects and working together with honest and transparent communications. We are sending this newsletter to provide a community update on the development of our Prairie Horizon Wind Project (the Project) located in Meeker and Kandiyohi Counties, near Cosmos, MN.

Project Update

BluEarth is working to develop the Prairie Horizon Wind Project with the support of local landowner partners, Adams Wind and Danielson Wind. The proposed Project would include up to 45 wind turbines located on private land, owned by participating landowners. This 200-megawatt (MW) Project would produce enough renewable energy to power approximately 70,000 Minnesotan homes annually. Once complete, the Project would include the installation of wind turbines, a substation, electrical collection systems, access roads, and a 345 kilovolt (kV) transmission line to the point of interconnection with the electric grid.

Since our last community newsletter in early 2025, our team has been active in the community consulting with Meeker County and reaching out to landowners to confirm interest in the Project. To date, we have signed 65 landowners to participate in the Project, representing more than 13,700 acres of private land. That's a big area – but the Project will not occupy all of this land. When operational, the Project will occupy less than 1% of the total area, which allows wind projects to work in harmony with existing land uses such as ranching and agriculture. Additional land is required during the development phase to allow for complete environmental studies of the area and to ensure project infrastructure (such as access roads, wind turbines and electrical substation) can be appropriately sited with setbacks from homes, existing roads and other infrastructure. As participants in the Project, these landowners will receive compensation throughout the various stages of the Project.

As development continues, BluEarth will also continue to consult with local County and Township officials and work to advance the engineering process to connect to the electric grid.

If you're interested in learning more about becoming a participant in the Project, we invite you to contact our land agent, Braxton Spilde.

Minnesota Energy Connection Transmission Line

In April 2025, Xcel Energy selected our preferred route for their new Minnesota Energy Connection transmission line, which is an important milestone for the Project.

This transmission line, built by Xcel, will bring electricity from renewable energy facilities to communities in southwestern and central Minnesota. Xcel's selected route in the area is an ideal location for the Project to interconnect to the electric grid and an important milestone in the Project's development. Xcel is expected to begin transmission line construction in this area in late 2026.

Did You Know?

BluEarth owns and operates the Adams and Danielson Wind Facilities near Cosmos, MN, in partnership with local landowners.

Through the State of Minnesota's Wind Energy Production Tax, our existing Adams & Danielson Wind Facilities contribute over \$135,000 in annual tax revenue that stays directly in the local community.

Giving Back

We are committed to giving back to the communities where we live, work, and operate. Our Community Investment Program includes annual scholarship opportunities and a project-specific community donation fund.

Adams & Danielson Wind Scholarship Program

On behalf of the local Adams and Danielson Wind Facilities, we award an annual scholarship to a graduating senior of the ACGC High School. The scholarship recognizes a student who demonstrates strong academic performance, a commitment to bettering their community, and displays an interest in a field of study applicable to renewable energy.

Congratulations to our 2026 Scholarship Recipient, Haley Johnson!

Community Funding

We have established a project-specific community investment fund on behalf of the Prairie Horizon Wind Project to provide direct benefit to the local community in support of our three giving priorities: Education, Community Building, and the Environment.

In 2026, on behalf of our Prairie Horizon Wind Project, we are proud to sponsor the inflatables park at the upcoming Cosmos Space Festival and Lake Lillian Fun Days. We look forward to seeing many of you enjoy a day in the sun!

We welcome community input on where donations should be directed to help bring the most benefit to the community. Learn more and submit an online funding request at: www.blueearthrenewables.com/funding/

BluEarth Renewables brings together extraordinary people with the power to change the future™ by delivering renewable energy to the power grid every day. We are a leading, independent, power producer that acquires, develops, builds, owns, and operates wind, hydro, solar, and energy storage facilities across North America. Our portfolio includes more than 750 MW (gross) in operation, under construction, or with a power purchase agreement and over 7 GW of high-quality development projects that are actively being advanced. In addition, we provide third-party operations for more than 300 MW of wind and solar across North America.
